

Task 1

Objective

To automate file operations using Python and understand exception handling.

Operations Performed

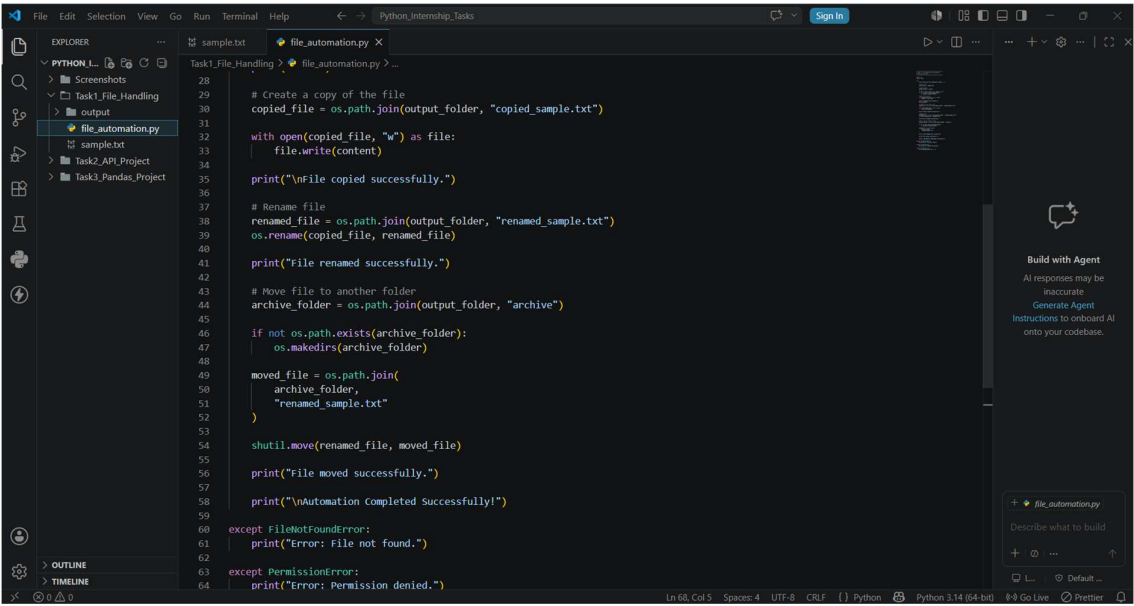

1. Read text file content.
2. Create a copy of the file.
3. Rename the copied file.
4. Move the file to another folder.
5. Create and delete a temporary file.
6. Handle errors using try-except blocks.

Concepts Used

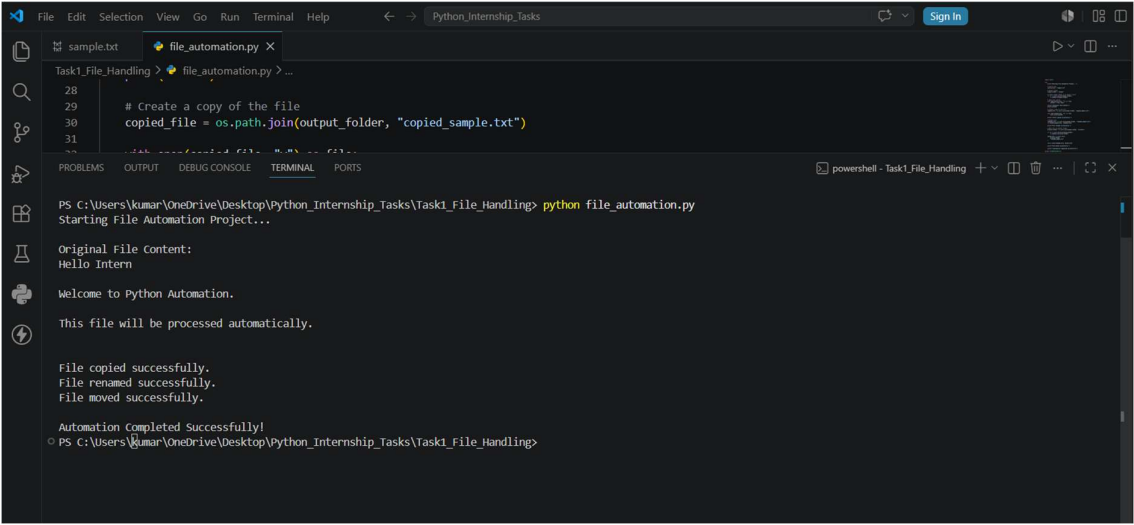

- File Handling
- os Module
- shutil Module
- Exception Handling
- Automation Logic
